Images

Perfect, all images have ALT attribute.

Number of images: 9

Missing alt tag: 0

The "alt" attribute provides a text equivalent for the image. If the browser cannot display an image the alt description will be given in its place. Furthermore, some visitors cannot see images as they might be blind in which the alt tag provides a valuable image description. Finally, search engines utilize the alt attribute for image search indexing. (www.w3.org/QA/Tips/altAttribute)

Title

We have found following title:

"Market Research Reports & Analysis | Bharat Book"

Length: 48 characters

The <TITLE> element provides a short piece of text describing the document. The title is very important as it shows in the window title bars, bookmarks and search results. Title should be between 60 to 80 characters long. (www.w3.org/QA/Tips/good-titles)

Description Metatag

We have found following description:

"Bharat Book Bureau provides a Complete Market Analysis Reports like Company Report, Online Database Report, Country Report, Custom Report, Discounted Reports."

Length: 158 characters

The description attribute should provide a concise explanation of a Web page's content. Also, the description is often displayed on search engine results and can affect page ranking. (en.wikipedia.org/wiki/Meta_element#The_description_attribute)

Keywords Metatag

We have found **4** keywords:

- Business Market Research Reports
- BuyMarket Reports Online
- Company Profile Analysis
- Market Research Industry Analysis

Length: 119 characters

The keywords attribute was utilized by search engines to provide more accurate search results. Due to the over usage and spamming the keywords attribute has been phased out and is no longer relevant. Google doesn't use the "keywords" meta tag in web search ranking. (googlewebmastercentral.blogspot.se/2009/09/google-does-not-use-keywords-meta-tag.html)

Text to HTML Ratio

The Text to HTML ratio is **15.94%**

Original content is by far the single most important element to search engines. Low Text to HTML ratio indicates little content for search engines to index. We consider it to be good practice to have a Text to HTML ratio of at least 10% and ideal above 20%

Keywords density and consistency are notable factors for optimal page SEO. Preferred keywords should have higher keywords density indicating their importance. Optimally, preferred keywords should also be consistently utilized in multiple essential areas of the page such as title, description meta tag, h1 through h6 headings, alt image attributes, backlinks and internal links anchor text. Keyword density of above 5% is a good indication that the word or phrase appears too many time in the content. ([more information](#))

(www.w3schools.com/tags/tag_noframes.asp).

Doctype

 HTML 5

The <!DOCTYPE> declaration tells the web browser about what version of HTML the page is written in. It is good practice to always add the <!DOCTYPE> declaration to the HTML documents, so that the browser knows what type of document to expect. (www.w3schools.com/tags/tag_DOCTYPE.asp)

The Favicon is a small icon associated with a website. The Favicon is important because it is displayed next to the website's URL in the address bar of the browser as well as in bookmarks and shortcuts. (en.wikipedia.org/wiki/Favicon)

Custom 404 Error Page

Yes, custom 404 error page detected.

A404 is a standard http response code for a resource that cannot be located on the server. Webservers usually return a "404 Not Found" error page for non-existing pages. Unfortunately, these default error pages are very generic and a not very user friendly, therefore, using a custom 404 error page is highly recommended.

Process of returning http status code "200 OK" for a non-existent page or redirecting users to another url is called soft 404. Soft 404 errors are problematic for search engines and are not advisable. (<https://support.google.com/webmasters/answer/181708>)

- <https://www.bharatbook.com/css/styles.css>

Print-friendly pages are designed to fit on an 8.5"x11" or A4 sheet and usually include only the content of the page, along with source information. (webdesign.about.com/od/printerfriendly/a/aa041403a.htm)

Domain Age

Your domain was registered for the first time: 17 years, 10 months, 23 days ago.

Domain Expiration

Your domain expires in: 3 years, 1 month, 5 days.

Domain expiration far in to the future is considered a good practice as it promotes confidence in your website, decreases chances of losing domain and in certain cases might help with search engine ranking. (<http://www.hover.com/blog/three-reasons-to-renew-your-domain-names-for-five-years>)

IP Canonicalization

Yes, your site's IP [67.55.118.181](#) redirects to www.bharatbook.com.

(http://googleonlinesecurity.blogspot.in/2014/08/https-as-ranking-signal_6.html).

Safe Browsing

Yes

Safe Browsing is a service provided by Google that enables applications to check URLs against Google's constantly updated lists of suspected phishing and malware pages. (<http://www.google.com/safebrowsing/diagnostic?site=>)

Spam Blacklist

Good, your IP is not blacklisted.

Spammer directories provide lists of IPs from which spam distribution is reported. Emails sent from the blocked IPs are subject to closer scrutiny and are much less likely to be delivered. For email campaigns it is recommended to utilize professional email services to ensure that your website IP is not blocked. (www.stopforumspam.com)

Email Address Obfuscation

Great, this webpage does not contain email addresses displayed in plain text.

It is recommended to obfuscate email addresses posted in public. This prevents email addresses from being automatically harvested by spam bots which helps to decrease number of unsolicited emails.

Directory Browsing

Great, your server has directory browsing disabled.

Protect Webserver directories from unwanted browsing. To enhance security, directory browsing should be disabled unless you have a specific reason to enable it. If you enable directory browsing, make sure that you only enable it on the particular directory or directories that you want to share. (<http://technet.microsoft.com/en-us/library/cc731109>)

Whois Privacy

No contact information available.

Whois Privacy is a service that prevents domain owner contact information from being displayed in the publicly available Whois records. This can help to cut down on unwanted spam but utilizing Whois privacy should be evaluated against business model and branding strategy.

Server Signature

On, Microsoft-IIS/7.5

Attackers can utilize server signature versioning information to their advantage therefore it is recommended to disable it when possible. (Disable server signature for [Apache](#) or [IIS](#)).
