## Images

Perfect, all images have ALT attribute.

**Number of images:** 1

**Missing alt tag:** 0

The "alt" attribute provides a text equivalent for the image. If the browser cannot display an image the alt description will be given in its place. Furthermore, some visitors cannot see images as they might be blind in which the alt tag provides a valuable image description. Finally, search engines utilize the alt attribute for image search indexing. ([www.w3.org/QA/Tips/altAttribute](http://www.w3.org/QA/Tips/altAttribute))

## Title

We have found following title:

*"Recruiting Software and Applicant Tracking System | Recruiterbox.com"*

**Length:** 68 characters

The <TITLE> element provides a short piece of text describing the document. The title is very important as it shows in the window title bars, bookmarks and search results. Title should be between 60 to 80 characters long. ([www.w3.org/QA/Tips/good-titles](http://www.w3.org/QA/Tips/good-titles))

## Description Metatag

We have found following description:

*"Recruiterbox is the easiest way to track applicants in one place with our online recruiting and resume management software, applicant tracking systems and other online recruitment systems."*

**Length:** 188 characters

**Warning:** The description is **188** characters long. The optimal description should not exceed **160** characters (<http://www.seomoz.org/learn-seo/meta-description>).

The description attribute should provide a concise explanation of a Web page's content. Also, the description is often displayed on search engine results and can affect page ranking. ([en.wikipedia.org/wiki/Meta\\_element#The\\_description\\_attribute](en.wikipedia.org/wiki/Meta_element#The_description_attribute))

## Keywords Metatag

We have found **2** keywords:

- recruitment software
- applicant tracking system

**Length:** 46 characters

The keywords attribute was utilized by search engines to provide more accurate search results. Due to the over usage and spamming the keywords attribute has been phased out and is no longer relevant. Google doesn't use the "keywords" meta tag in web search ranking. ([googlewebmastercentral.blogspot.se/2009/09/google-does-not-use-keywords-meta-tag.html](http://googlewebmastercentral.blogspot.se/2009/09/google-does-not-use-keywords-meta-tag.html))

## Text to HTML Ratio

The Text to HTML ratio is **25.29%**

Original content is by far the single most important element to search engines. Low Text to HTML ratio indicates little content for search engines to index. We consider it to be good practice to have a Text to HTML ratio of at least 10% and ideal above 20%

## Keyword Density & Consistency

	Consistent	Keywords	Density	Count	Title	Description	H1-H6	ALT	Bold
		recruitment	3.77%	30	-	1	9	1	-
		recruiterbox	2.77%	22	1	1	4	1	-
		software	2.64%	21	1	1	6	1	-
		applicant	1.76%	14	1	1	3	1	-
		tracking	1.51%	12	1	1	3	1	-
		job	1.26%	10	-	-	1	-	-
		one	1.13%	9	-	1	2	-	-
		applicants	1.13%	9	-	1	2	-	-
		resume	1.13%	9	-	1	1	-	-
		candidates	1.13%	9	-	-	1	-	-
-----									
		recruitment software	2.01%	16	-	-	6	-	-
		applicant tracking	1.26%	10	1	1	3	-	-
		one place	0.75%	6	-	1	1	-	-
		tracking system	0.50%	4	1	-	1	-	-
		tracking systems	0.38%	3	-	1	-	-	-
-----									
		applicant tracking system	0.50%	4	1	-	1	-	-
		applicant tracking systems	0.38%	3	-	1	-	-	-
		other online recruitment	0.13%	1	-	1	-	-	-
		resume management software	0.13%	1	-	1	-	-	-
		online recruitment systems	0.13%	1	-	1	-	-	-

Keywords density and consistency are notable factors for optimal page SEO. Preferred keywords should have higher keywords density indicating their importance. Optimally, preferred keywords should also be consistently utilized in multiple essential areas of the page such as title, description meta tag, h1 through h6 headings, alt image attributes, backlinks and internal links anchor text. Keyword density of above 5% is a good indication that the word or phrase appears too many time in the content. ([more information](#))

## Frames

 Yes, 1 inline frame(s) detected.

It is not recommended to use frames or iframes because they can cause problems for search engines. It is best to avoid frames and inline frames whenever possible ([searchenginewatch.com/article/2064573/Search-Engines-and-Frames](http://searchenginewatch.com/article/2064573/Search-Engines-and-Frames)). If frames must be utilized consider <noframes> tag. ([www.w3schools.com/tags/tag\\_noframes.asp](http://www.w3schools.com/tags/tag_noframes.asp)).

## Flash

No flash detected.

Flash and other reach-media technologies should primarily be utilized for decorative purposes. This makes your site more search engine friendly and improves accessibility ([support.google.com/webmasters/bin/answer.py?hl=en&answer=72746#1](https://support.google.com/webmasters/bin/answer.py?hl=en&answer=72746#1)).

The <!DOCTYPE> declaration tells the web browser about what version of HTML the page is written in. It is good practice to always add the <!DOCTYPE> declaration to the HTML documents, so that the browser knows what type of document to expect. A deprecated element is one that has been outdated by newer constructs. Deprecated elements may become obsolete in future versions of HTML so it is recommended not to use them. ([webdesign.about.com/od/htmltags/a/bltags\\_deprctag.htm](http://webdesign.about.com/od/htmltags/a/bltags_deprctag.htm))

## Nested HTML Tables

 Great, no nested tables detected.

In general it is not recommended to use nested tables or to utilize tables for page layout. Nested tables are known to cause performance issues due to increased HTML size and rendering time. It is better to use [CSS layout](#) instead.

## Web Analytics

 Yes, we have detected following web analytics tools:  
 Google™ Analytics

## Custom 404 Error Page

Yes, custom 404 error page detected.

A404 is a standard http response code for a resource that cannot be located on the server. Webservers usually return a "404 Not Found" error page for non-existing pages. Unfortunately, these default error pages are very generic and a not very user friendly, therefore, using a custom 404 error page is highly recommended.

Process of returning http status code "200 OK" for a non-existent page or redirecting users to another url is called soft 404. Soft 404 errors are problematic for search engines and are not advisable. (<https://support.google.com/webmasters/answer/181708>)

HTTPS protocol requires your website to have an SSL certificate, which can be purchased from a Certificate Authority (CA) or SSL vendor. ([http://googleonlinesecurity.blogspot.in/2014/08/https-as-ranking-signal\\_6.html](http://googleonlinesecurity.blogspot.in/2014/08/https-as-ranking-signal_6.html)).

## Safe Browsing

Yes

Safe Browsing is a service provided by Google that enables applications to check URLs against Google's constantly updated lists of suspected phishing and malware pages. (<http://www.google.com/safebrowsing/diagnostic?site=>)

## Spam Blacklist

Good, your IP is not blacklisted.

Spammer directories provide lists of IPs from which spam distribution is reported. Emails sent from the blocked IPs are subject to closer scrutiny and are much less likely to be delivered. For email campaigns it is recommended to utilize professional email services to ensure that your website IP is not blocked. ([www.stopforumspam.com](http://www.stopforumspam.com))

## Email Address Obfuscation

## Directory Browsing

Great, your server has directory browsing disabled.

Protect Webserver directories from unwanted browsing. To enhance security, directory browsing should be disabled unless you have a specific reason to enable it. If you enable directory browsing, make sure that you only enable it on the particular directory or directories that you want to share. (<http://technet.microsoft.com/en-us/library/cc731109>)

## Whois Privacy

Whois Privacy is a service that prevents domain owner contact information from being displayed in the publicly available Whois records. This can help to cut down on unwanted spam but utilizing Whois privacy should be evaluated against business model and branding strategy.

## Server Signature

Good, your server does not provide version information.

Attackers can utilize server signature versioning information to their advantage therefore it is recommended to disable it when possible. (Disable server signature for [Apache](#) or [IIS](#)).
