The "alt" attribute provides a text equivalent for the image. If the browser cannot display an image the alt description will be given in its place. Furthermore, some visitors cannot see images as they might be blind in which the alt tag provides a valuable image description. Finally, search engines utilize the alt attribute for image search indexing. ([www.w3.org/QA/Tips/altAttribute](http://www.w3.org/QA/Tips/altAttribute))

## Title

We have found following title:

*"AddThis - Get more likes, shares and follows with smart web site tools"*

**Length:** 69 characters

The <TITLE> element provides a short piece of text describing the document. The title is very important as it shows in the window title bars, bookmarks and search results. Title should be between 60 to 80 characters long. ([www.w3.org/QA/Tips/good-titles](http://www.w3.org/QA/Tips/good-titles))

## Description Metatag

We have found following description:

*"AddThis share buttons, targeting tools and content recommendations help you get more likes, shares and followers and keep them coming back."*

**Length:** 139 characters

The description attribute should provide a concise explanation of a Web page's content. Also, the description is often displayed on search engine results and can affect page ranking. ([en.wikipedia.org/wiki/Meta\\_element#The\\_description\\_attribute](http://en.wikipedia.org/wiki/Meta_element#The_description_attribute))

## Keywords Metatag

We have found **39** keywords:

- Addthis
- marketing platform
- audience insights
- audience intelligence
- audience intel
- managed service
- segment licensing
- data products
- website personalization
- personalize website
- personalization

- recommended content
- content widget
- wordpress
- joomla
- blogger

**Length:** 624 characters

The keywords attribute was utilized by search engines to provide more accurate search results. Due to the over usage and spamming the keywords attribute has been phased out and is no longer relevant. Google doesn't use the "keywords" meta tag in web search ranking. ([googlewebmastercentral.blogspot.se/2009/09/google-does-not-use-keywords-meta-tag.html](http://googlewebmastercentral.blogspot.se/2009/09/google-does-not-use-keywords-meta-tag.html))

## Text to HTML Ratio

The Text to HTML ratio is **16.66%**

Original content is by far the single most important element to search engines. Low Text to HTML ratio indicates little content for search engines to index. We consider it to be good practice to have a Text to HTML ratio of at least 10% and ideal above 20%

	⚠	smart website tools	0.28%	1	1	-	-	-	-
	⚠	keep them coming	0.28%	1	-	1	-	-	-

Keywords density and consistency are notable factors for optimal page SEO. Preferred keywords should have higher keywords density indicating their importance. Optimally, preferred keywords should also be consistently utilized in multiple essential areas of the page such as title, description meta tag, h1 through h6 headings, alt image attributes, backlinks and internal links anchor text. Keyword density of above 5% is a good indication that the word or phrase appears too many time in the content. ([more information](#))

## Frames

No frames detected.

It is not recommended to use frames or iframes because they can cause problems for search engines. It is best to avoid frames and inline frames whenever possible ([searchenginewatch.com/article/2064573/Search-Engines-and-Frames](http://searchenginewatch.com/article/2064573/Search-Engines-and-Frames)). If frames must be utilized consider <noframes> tag. ([www.w3schools.com/tags/tag\\_noframes.asp](http://www.w3schools.com/tags/tag_noframes.asp)).

## Flash

No flash detected.

Flash and other reach-media technologies should primarily be utilized for decorative purposes. This makes your site more search engine friendly and improves accessibility ([support.google.com/webmasters/bin/answer.py?hl=en&answer=72746#1](https://support.google.com/webmasters/bin/answer.py?hl=en&answer=72746#1)).

The <h1> to <h6> tags are used to define HTML headings. The <h1> tag should hold the title describing the content of a specific page therefore only one h1 tag is needed per page. There can be any number of h2 - h6 tags but they should be added in order of importance ([www.w3schools.com/tags/tag\\_hn.asp](http://www.w3schools.com/tags/tag_hn.asp)).

## Doctype

 HTML 5

The <!DOCTYPE> declaration tells the web browser about what version of HTML the page is written in. It is good practice to always add the <!DOCTYPE> declaration to the HTML documents, so that the browser knows what type of document to expect. ([www.w3schools.com/tags/tag\\_DOCTYPE.asp](http://www.w3schools.com/tags/tag_DOCTYPE.asp))

## Character Encoding

 UTF-8 (Unicode)  
Covers: Worldwide

## Language

 Declared Language: en (English)  
Language Attribute: en (English)

## W3C Markup Validation

 Status: **FAILED** [29 errors, 7 warning(s)]

 Good, no deprecated elements found.

A deprecated element is one that has been outdated by newer constructs. Deprecated elements may become obsolete in future versions of HTML so it is recommended not to use them. ([webdesign.about.com/od/htmltags/a/bltags\\_deprctag.htm](http://webdesign.about.com/od/htmltags/a/bltags_deprctag.htm))

## Nested HTML Tables

 Great, no nested tables detected.

In general it is not recommended to use nested tables or to utilize tables for page layout. Nested tables are known to cause performance issues due to increased HTML size and rendering time. It is better to use [CSS layout](#) instead.

## Web Analytics

 Yes, we have detected following web analytics tools:  
 Google™ Analytics

Web Analytics Tools collect and measure information about visitor activity on a website. Well interpreted web traffic data is invaluable in determining a successfully web strategy and assessing the effectiveness of a website. At a minimum, we recommend to utilize at least one web analytics tool.

## robots.txt

Yes, <http://addthis.com/robots.txt>

A robots.txt file restricts access to your site by search engine robots that crawl the web. ([www.robotstxt.org/robotstxt.html](http://www.robotstxt.org/robotstxt.html))

## XML Sitemap

Found following XML sitemap(s):

- <http://www.addthis.com/sitemap.xml>

Sitemaps inform search engines about pages available for crawling. In its simplest form, a Sitemap is an XML file that lists URLs for a site along with additional metadata about each URL. XML sitemap should help search engines to crawl the site more intelligently.

(<http://www.sitemaps.org/protocol.html>)

✓ Minify HTML	None
✓ Minify JavaScript	None
✗ Eliminate render-blocking JavaScript and CSS in above-the-fold content	High

Mobile PageSpeed analyzes webpages and evaluates its performance while providing suggestions on reducing page load times. Google is incorporating website speed in search ranking (<http://www.matcutts.com/blog/site-speed>)

## Mobile Experience

Mobile User Experience: **83%**(High)

- ✓ **Avoid plugins** - Your page does not appear to use plugins, which would prevent content from being usable on many platforms.
- ✓ **Configure the viewport** - Your page specifies a viewport matching the device's size, which allows it to render properly on all devices.
- ✓ **Size content to viewport** - The contents of your page fit within the viewport.
- ✗ **Size tap targets appropriately** - Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider making these tap targets larger to provide a better user experience. The following tap targets are close to other nearby tap targets and may need additional spacing around them. [show more](#)
  - The tap target `<a href="https://www.fa...k.com/AddThis/"></a>` and 1 others are close to other tap targets.
  - The tap target `<a href="/get/share">Share Buttons</a>` and 21 others are close to other tap targets.
- ✓ **Use legible font sizes** - The text on your page is legible.
- ✗ **Mobile Page Speed** - Your page speed is **average** on mobile devices.

Mobile users have now become a critical part of online visits. Making the website mobile friendly is no longer an option but rather necessity. (<https://developers.google.com/webmasters/smartphone-sites/>)

## Favicon

file: <http://addthis.com/favicon.ico>  
size: 32px by 32px  
type: image/x-icon

The Favicon is a small icon associated with a website. The Favicon is important because it is displayed next to the website's URL in the address bar of the browser as well as in bookmarks and shortcuts. ([en.wikipedia.org/wiki/Favicon](http://en.wikipedia.org/wiki/Favicon))

## Custom 404 Error Page

No custom 404 error page detected.

**Warning:** Soft 404 error detected redirecting to <http://www.addthis.com/404error>.

A404 is a standard http response code for a resource that cannot be located on the server. Webservers usually return a "404 Not Found" error page for non-existing pages. Unfortunately, these default error pages are very generic and a not very user friendly, therefore, using a custom 404 error page is highly recommended.

Process of returning http status code "200 OK" for a non-existent page or redirecting users to another url is called soft 404. Soft 404 errors are problematic for search engines and are not advisable. (<https://support.google.com/webmasters/answer/181708>)

## Printability

Could not locate print-friendly CSS.

Print-friendly pages are designed to fit on an 8.5"x11" or A4 sheet and usually include only the content of the page, along with source information. ([webdesign.about.com/od/printerfriendly/a/aa041403a.htm](http://webdesign.about.com/od/printerfriendly/a/aa041403a.htm))

## W3C CSS Validation

Status: **FAILED** [349 error(s)]

## DMOZ

Not Listed

DMOZ the Open Directory Project is the most comprehensive human edited directory of the Web, compiled by a vast global community of volunteer editors. ([www.dmoz.org/help/geninfo.html](http://www.dmoz.org/help/geninfo.html))

## Domain Age

Your domain was registered for the first time: 18 years, 7 months, 4 days ago.

Age of the domain is one of the many signals that search engines utilize for ranking. Brand new domains generally have more difficult time to rank high for the first few months. (<http://www.coconutheadphones.com/does-domain-age-matter>)

## Domain Expiration

Your domain expires in: 2 years, 4 months, 22 days.

Domain expiration far in to the future is considered a good practice as it promotes confidence in your website, decreases chances of losing domain and in certain cases might help with search engine ranking. (<http://www.hover.com/blog/three-reasons-to-renew-your-domain-names-for-five-years>)
