Images

Perfect, all images have ALT attribute.

Number of images: 10
Missing alt tag: 0

The "alt" attribute provides a text equivalent for the image. If the browser cannot display an image the alt description will be given in its place. Furthermore, some visitors cannot see images as they might be blind in which the alt tag provides a valuable image description. Finally, search engines utilize the alt attribute for image search indexing. (www.w3.org/QA/Tips/altAttribute)

Title

We have found following title:

"Leading Brand Consultancy Firm in Pune, India"

Length: 45 characters

The <TITLE> element provides a short piece of text describing the document. The title is very important as it shows in the window title bars, bookmarks and search results. Title should be between 60 to 80 characters long. (www.w3.org/QA/Tips/good-titles)

Description Metatag

We have found following description:

":We are a leading brand consultancy firm in Pune, India. We offer logo designs, branding, web designing & development, digital marketing, content writing."

Length: 154 characters

The description attribute should provide a concise explanation of a Web page's content. Also, the description is often displayed on search engine results and can affect page ranking. (en.wikipedia.org/wiki/Meta_element#The_description_attribute)

Keywords Metatag

No Keywords Found.

The keywords attribute was utilized by search engines to provide more accurate search results. Due to the over usage and spamming the keywords attribute has been phased out and is no longer relevant. Google doesn't use the "keywords" meta tag in web search ranking. (googlewebmastercentral.blogspot.se/2009/09/google-does-not-use-keywords-meta-tag.html)

Text to HTML Ratio

The Text to HTML ratio is **23.32%**

Original content is by far the single most important element to search engines. Low Text to HTML ratio indicates little content for search engines to index. We consider it to be good practice to have a Text to HTML ratio of at least 10% and ideal above 20%
