It is also one of the ways to improve country specific SEO and performance. (<http://www.searchenginejournal.com/seo-without-boarders-a-guide-to-international-seo-nick-paterman/60092/>)

## Images

Perfect, all images have ALT attribute.

**Number of images:** 9

**Missing alt tag:** 0

The "alt" attribute provides a text equivalent for the image. If the browser cannot display an image the alt description will be given in its place. Furthermore, some visitors cannot see images as they might be blind in which the alt tag provides a valuable image description. Finally, search engines utilize the alt attribute for image search indexing. ([www.w3.org/QA/Tips/altAttribute](http://www.w3.org/QA/Tips/altAttribute))

## Title

We have found following title:

*"Online Marketing Services Company Delhi, India | Splashsys Webtech"*

**Length:** 66 characters

The <TITLE> element provides a short piece of text describing the document. The title is very important as it shows in the window title bars, bookmarks and search results. Title should be between 60 to 80 characters long. ([www.w3.org/QA/Tips/good-titles](http://www.w3.org/QA/Tips/good-titles))

## Description Metatag

We have found following description:

*"Creative solutions for website design, development, performance based SEO, PPC, SMM, and quality content writing services. Call - +91-11-41527823"*

**Length:** 145 characters

The description attribute should provide a concise explanation of a Web page's content. Also, the description is often displayed on search engine results and can affect page ranking. ([en.wikipedia.org/wiki/Meta\\_element#The\\_description\\_attribute](https://en.wikipedia.org/wiki/Meta_element#The_description_attribute))

## Keywords Metatag

No Keywords Found.

The keywords attribute was utilized by search engines to provide more accurate search results. Due to the over usage and spamming the keywords attribute has been phased out and is no longer relevant. Google doesn't use the "keywords" meta tag in web search ranking. ([googlewebmastercentral.blogspot.se/2009/09/google-does-not-use-keywords-meta-tag.html](http://googlewebmastercentral.blogspot.se/2009/09/google-does-not-use-keywords-meta-tag.html))

## Text to HTML Ratio

The Text to HTML ratio is **28.06%**

Original content is by far the single most important element to search engines. Low Text to HTML ratio indicates little content for search engines to index. We consider it to be good practice to have a Text to HTML ratio of at least 10% and ideal above 20%

## Keyword Density & Consistency

	Consistent	Keywords	Density	Count	Title	Description	H1-H6	ALT	Bold
		services	2.65%	15	1	1	-	-	-
		marketing	2.29%	13	1	-	-	1	-

		splashsys webtech	0.88%	5	1	-	1	-	-
		search engine	0.88%	5	-	-	-	-	-
		reputation management	0.88%	5	-	-	-	-	-
		content marketing	0.88%	5	-	-	-	-	-
-----									
		search engine optimization	0.71%	4	-	-	-	-	-
		social media marketing	0.53%	3	-	-	-	-	-
		marketing services company	0.18%	1	1	-	-	-	-
		services company delhi	0.18%	1	1	-	-	-	-
		online marketing services	0.18%	1	1	-	-	-	-

Keywords density and consistency are notable factors for optimal page SEO. Preferred keywords should have higher keywords density indicating their importance. Optimally, preferred keywords should also be consistently utilized in multiple essential areas of the page such as title, description meta tag, h1 through h6 headings, alt image attributes, backlinks and internal links anchor text. Keyword density of above 5% is a good indication that the word or phrase appears too many time in the content. ([more information](#))

## Frames

Yes, 1 inline frame(s) detected.

It is not recommended to use frames or iframes because they can cause problems for search engines. It is best to avoid frames and inline frames whenever possible ([searchenginewatch.com/article/2064573/Search-Engines-and-Frames](http://searchenginewatch.com/article/2064573/Search-Engines-and-Frames)). If frames must be utilized consider <noframes> tag. ([www.w3schools.com/tags/tag\\_noframes.asp](http://www.w3schools.com/tags/tag_noframes.asp)).

## Flash

 No flash detected.

Flash and other reach-media technologies should primarily be utilized for decorative purposes. This makes your site more search engine friendly and improves accessibility ([support.google.com/webmasters/bin/answer.py?hl=en&answer=72746#1](https://support.google.com/webmasters/bin/answer.py?hl=en&answer=72746#1)).

The <!DOCTYPE> declaration tells the web browser about what version of HTML the page is written in. It is good practice to always add the <!DOCTYPE> declaration to the HTML documents, so that the browser knows what type of document to expect. ([www.w3schools.com/tags/tag\\_DOCTYPE.asp](http://www.w3schools.com/tags/tag_DOCTYPE.asp))

## Character Encoding

**Covers:** Worldwide

## W3C Markup Validation

- ✗ Status: **FAILED** [9 errors, 8 warning(s)]

- ✓ Good, no deprecated elements found.

A deprecated element is one that has been outdated by newer constructs. Deprecated elements may become obsolete in future versions of HTML so it is recommended not to use them. ([webdesign.about.com/od/htmltags/a/bltags\\_deprctag.htm](http://webdesign.about.com/od/htmltags/a/bltags_deprctag.htm))

- ✓ Yes, we have detected following web analytics tools:
  - ✓ Google™ Analytics

Web Analytics Tools collect and measure information about visitor activity on a website. Well interpreted web traffic data is invaluable in determining a successfully web strategy and assessing the effectiveness of a website. At a minimum, we recommend to utilize at least one web analytics tool.

## robots.txt

## XML Sitemap

- ✓ Found following XML sitemap(s):
  - <http://splashsys.com/sitemap.xml>

Sitemaps inform search engines about pages available for crawling. In its simplest form, a Sitemap is an XML file that lists URLs for a site along with additional metadata about each URL. XML sitemap should help search engines to crawl the site more intelligently. (<http://www.sitemaps.org/protocol.html>)

Mobile internet usage has been exceeding PC's since 2014 and growing so it is critical for pages to render correctly on mobile devices.

[show more](#)
  - The tap target `<a href="website-design.html">website design</a>` and 5 others are close to other tap targets final.

file: <http://splashsys.com/favicon.ico>  
size: 16px by 16px  
type: image/x-icon

The Favicon is a small icon associated with a website. The Favicon is important because it is displayed next to the website's URL in the address bar of the browser as well as in bookmarks and shortcuts. ([en.wikipedia.org/wiki/Favicon](http://en.wikipedia.org/wiki/Favicon))

## Custom 404 Error Page

Yes, custom 404 error page detected.

A404 is a standard http response code for a resource that cannot be located on the server. Webservers usually return a "404 Not Found" error page for non-existing pages. Unfortunately, these default error pages are very generic and a not very user friendly, therefore, using a custom 404 error page is highly recommended.

Process of returning http status code "200 OK" for a non-existent page or redirecting users to another url is called soft 404. Soft 404 errors are problematic for search engines and are not advisable. (<https://support.google.com/webmasters/answer/181708>)

## Printability

Could not locate print-friendly CSS.

Print-friendly pages are designed to fit on an 8.5"x11" or A4 sheet and usually include only the content of the page, along with source information. ([webdesign.about.com/od/printerfriendly/a/aa041403a.htm](http://webdesign.about.com/od/printerfriendly/a/aa041403a.htm))

## Domain Expiration

Your domain expires in: 1 year, 7 months, 22 days.

([http://googleonlinesecurity.blogspot.in/2014/08/https-as-ranking-signal\\_6.html](http://googleonlinesecurity.blogspot.in/2014/08/https-as-ranking-signal_6.html)).

Safe Browsing is a service provided by Google that enables applications to check URLs against Google's constantly updated lists of suspected phishing and malware pages. (<http://www.google.com/safebrowsing/diagnostic?site=>)

## Spam Blacklist

Good, your IP is not blacklisted.

Spammer directories provide lists of IPs from which spam distribution is reported. Emails sent from the blocked IPs are subject to closer scrutiny and are much less likely to be delivered. For email campaigns it is recommended to utilize professional email services to ensure that your website IP is not blocked. ([www.stopforumspam.com](http://www.stopforumspam.com))

If you enable directory browsing, make sure that you only enable it on the particular directory or directories that you want to share. (<http://technet.microsoft.com/en-us/library/cc731109>)
